

School of Mechanical Engineering

CAD-CAM

EventID:MET1604

The very esserts of engineering is designing. Designing requires creativity, implacable visualisation and thinking out of the box quotients. Cad Cam is premisely to test the designing and modelling aptitude in future engineers wherein the participants will be given an object to design on any Cad modelling software of their choice. The object itself will be in assembly of parts, each of which had to be designed by separately.

Participants will be given 2 hours to design the object, where in they'll be checked for their predefined properties like mass, volume and C.O.G. one who matches the ideal object ends up as the winner
